BED BUGS

ADAMS PEST CONTROL HAS DEEP KNOWLEDGE AND EXPERIENCE IN IDENTIFYING, TREATING, AND PREVENTING THESE SPECIES AND MORE.

WE HAVE THE PROVEN CUSTOMIZED PM STRATEGIES & SOLUTIONS FOR ALL YOUR CURRENT & POTENTIAL PEST CONTROL ISSUES.

THE GENERAL PHASES OF THE ONGOING PM PROCESS ARE:

SET ACTION THRESHOLDS

Before taking any pest control action, PM first sets an action threshold, a point at which pest populations or environmental conditions indicate that pest control action must be taken.

MONITOR & IDENTIFY PESTS

PM programs work to monitor for pests and identify them accurately, so that appropriate control decisions can be made in conjunction with action thresholds.

PREVENTION

As a first line of pest control, PM programs work to manage space to prevent pests from becoming a threat. These control methods can be very effective and cost efficient and present little to no risk to people or the environment.

CONTROL

Once monitoring, identification, and action thresholds indicate that pest control is required, and preventive methods are no longer effective or available, PM programs then evaluate the proper control method both for effectiveness and risk.

FOOD INDUSTRIES

IN THE WORLD OF PEST CONTROL; PERHAPS NO INDUSTRY IS AT MORE RISK THEN THE FOOD INDUSTRY.

Between food, optimal temperatures, and habitable spaces; places of food manufacturing, warehousing and distribution offer the perfect environment for pests to build habitats and colonies.

As such, compliance of Federal, State and Local food safety, as well as the safety and satisfaction of your employees and customers are critical parts of any food-related businesses.

Adams Pest Control serves all sectors within the food industry and has the experience and knowledge to provide thorough audits, and develop the perfect IPM solutions so your business can confidently pass inspections as well as maintain high levels of health and service quality for your employees and customers.
